SKILLS

Back-end

`.NET Core` `C#`
`Node Js`

Front-end

`React Js` `Redux`
`JavaScript` `TypeScript`
`Angular 2+` `jQuery`

Database / ORM

`SQL Server` `EF Core`
`MongoDB` `Dapper`
`Firebase`

DevOps / Misc.

`Azure` `Git`
`RESTful Web API`
`Agile (SCRUM)`
`xUnit` `Docker`

VOLUNTEERING

Software Developer - New Zealand Business Association

03/2021 - Present

Worked on an online invoicing and accounting solution, in an agile team environment.

Tasks / Achievements

☐ Built the UI for registering a user / organisation, from the mock designs

☐ Set up the registration logic (forms, services, pipes etc) on the Angular front-end, with constant feedback from the rest of the team.

☐ Liaised with our Business Analyst and the development team to discuss requirements / update features based on feedback.

☐ Helped newer developers on the team set up their dev environment, and get up to speed with our development process.

PROJECTS

Diet Tracker - Industry Project

A web application that lets users keep track of their daily diets. Users can search multiple databases for food items, to track their nutrition. They can also use the in-built nutrient calculator to set goals, view a daily/weekly summary of their intakes, and export summaries in a csv format.

`ASP.NET Core` `C#` `EF Core` `SQL Server` `jQuery` `Azure DevOps`

More details can be viewed on the website below

Countdown Shop Clone - Solo Project

Imitates the design and features of the online countdown shop, built with the MERN stack. Uses JWT for user auth, and redux for state management. Users can register, login, and browse/purchase items from the store.

`React Js` `Node Js` `Mongo DB` `TypeScript` `Redux`
